	THE TOOL	Does it work with Bb? How do I include it?
DAY 1: Get Their Attention	Weebly	Weebly is a website building tool, so your Weebly webpage isn't something that's going to "live" within your Bb site. However, it is very easy to include a link out to your Weebly webpage from pretty much any content area – in editing mode, first highlight the text that you want to act as your link, click the hyperlink link button in the menu bar, and then add your Weebly URL. 	YouTube	For any of the video websites, you can just include a link from within Bb out to the video webpage. However, including the actual video player in your Bb page helps provide some variety, breaking up all the usual text. The secret to including the actual video player is finding the embed code - once you have copied the embed code from the video site, you can include the video in any content area within Bb by pasting the code in your Bb editing window. Remember, you must paste the code while you are in HTML mode, so you'll need to click the HTML toggle button before you can add the code. 	Hulu	
	Video News sources	
	Animoto	
	Flickr	Once you have found and downloaded images from Flickr, and then done any necessary editing using Fotoflexer, you can include the image in Bb by using the "Attach Image" button from the editing menu bar: 	Fotoflexer	
DAY 2: Simple but Effective	Wordle	Just like with videos, once you've created your Wordle, you need to locate the embed code, copy it, and then (in edit mode) paste that code into the desired content area in Blackboard. The Wordle will look tiny in Blackboard, but it is 'clickable' and will take you to the full-sized version at the Wordle site.
	PollDaddy	Embedding the actual PollDaddy poll itself into Bb doesn't work so well – but you can certainly create a link from Bb out to the poll (see the Weebly comments, above).
	PollEverywhere	Interestingly, the "Live Chart Widget" (which you'd typically use in class, so that students can respond via cell phone) works great, but the "Web Voting Widget" (which would be more useful on Bb, since it would be used asynchronously) doesn't work.
	Doodle	Embedding the actual Doodle poll itself into Bb doesn't work so well – but you can certainly create a link from Bb out to the poll.
	TimeToast	TimeToast works well with Bb – again, you need the embed code, and then you can include it anywhere in Bb by pasting the embed code (using the HTML toggle)
	Delicious	You can provide a link to your delicious page if it contains resources that you want to provide for your students.
	ScreenJelly	Once your Screenjelly video is created, you can embed the video just like you would any other video – using the embed code!

<table>
<tr><td rowspan="4">DAY 3: Be My 'Friend'</td><td>Facebook</td><td rowspan="4">Your social networking sites probably aren't the type of tools that you will be incorporating inside Blackboard, but you certainly could provide access to your Twitter/Facebook/ZooLoo by including a link within Bb to any of these sites.

If you use HootCourse, there is a widget that you can embed in your Bb course page that will keep track of participation, discussions, questions, links...</td></tr>
<tr><td>Twitter</td></tr>
<tr><td>HootCourse</td></tr>
<tr><td>ZooLoo</td></tr>
<tr><td rowspan="3">DAY 4: Let's Work Together</td><td>GoogleDocs</td><td>GoogleDocs is more about collaborating on a document or an idea, not so much something you'd be including in Bb…</td></tr>
<tr><td>GoogleForms</td><td>The actual survey form can be embedded in Bb (within the GoogleForms results spreadsheet area, click "Form" > "Embed form in a webpage" to get the embed code), or you can include a link from Bb to the live form.</td></tr>
<tr><td>VoiceThread</td><td>Once again, all you need is the magic embed code! In VoiceThread, once you've found (or created) a VT that you want to use, just click
"Menu" > "embed"
to locate and copy the embed code.</td></tr>
<tr><td rowspan="2">MORE TOOLS</td><td>Glogster</td><td rowspan="2">It is possible to embed both Wallwisher and Glogster objects into Blackboard, but we don't really recommend it – both tools create objects that are rather large, and better viewed within their home environments. However, a link to your object from pretty much any content area within Blackboard works very well.

Remember, in editing mode, first highlight the text that you want to act as your link, click the hyperlink link button in the menu bar, and then add your Weebly URL.
 </td></tr>
<tr><td>Wallwisher</td></tr>
